

Is the scaled-up RAW case better (lower net impact)?

scaled up vs. prototype - today

	biopol	knit	timber	cfw
climate change	yes	no	no	no
ozone depletion	yes	no	no	no
particulate matter formation	yes	no	no	no
acidification	yes	no	no	no
freshwater eutrophication	yes	no	no	no
land use	yes	no	no	no
water use	yes	no	no	no
mineral resources	yes	no	no	no

scaled up vs. prototype - 2050

	biopol	knit	timber	cfw
climate change	yes	no	no	no
ozone depletion	yes	no	no	no
particulate matter formation	yes	no	no	no
acidification	yes	no	no	no
freshwater eutrophication	yes	no	no	no
land use	yes	no	no	no
water use	yes	no	no	no
mineral resources	yes	no	no	no

scaled up vs. conventional bio-based - today

	biopol	knit	timber	cfw
climate change	no	n/a	yes	no
ozone depletion	no	n/a	no	no
particulate matter formation	no	n/a	yes	yes
acidification	no	n/a	no	no
freshwater eutrophication	no	n/a	no	no
land use	no	n/a	yes	yes
water use	no	n/a	no	no
mineral resources	no	n/a	no	no

scaled up vs. conventional bio-based - 2050

	biopol	knit	timber	cfw
climate change	no	n/a	yes	no
ozone depletion	no	n/a	yes	no
particulate matter formation	no	n/a	yes	yes
acidification	no	n/a	yes	no
freshwater eutrophication	no	n/a	no	no
land use	no	n/a	yes	yes
water use	no	n/a	no	no
mineral resources	no	n/a	no	no

scaled up vs. conventional fossil-based - today

	biopol	knit	timber	cfw
climate change	no	yes	yes	yes
ozone depletion	no	yes	yes	yes
particulate matter formation	no	no	yes	yes
acidification	no	no	yes	yes
freshwater eutrophication	no	yes	yes	yes
land use	no	no	yes	yes
water use	no	yes	yes	yes
mineral resources	no	no	yes	yes

scaled up vs. conventional fossil-based - 2050

	biopol	knit	timber	cfw
climate change	no	yes	yes	yes
ozone depletion	no	yes	yes	yes
particulate matter formation	no	no	yes	yes
acidification	no	no	yes	yes
freshwater eutrophication	no	no	yes	yes
land use	no	no	yes	yes
water use	no	yes	yes	yes
mineral resources	no	no	yes	yes
