Today

	Is the scaled-up version better than the prototype?				Is the scaled-up version better than the bio-based baseline?				Is the scaled-up version better than the conventional fossil-based product?

yes = lower net impact (typical values). biopol: 3D-printed wall, knit: knitted membrane, timber: reclaimed timber beam, cfw: filament-wound beam.
Bio-based baseline of knit and cfw: the same product without the RAW optimisation.
